### Watershare

watershare®

Global expertise for local water challenges

Watershare is a worldwide network of water research organisations and utilities dedicated to applying global expertise to master local water challenges. Watershare members develop and share knowledge within five key water themes:

1. Subsurface Water Solutions
2. Emerging Substances
3. Resilient Urban Water Management
4. Future-Proof Water Infrastructures
5. Resource Recovery & Upcycling

Each theme has its own Community of Practice, in which member experts collaborate in developing knowledge and science-based tools. The experts then apply this expertise in tackling a wide variety of water issues in their regions. Watershare is showcasing a number of projects at IWA Tokyo to present concrete reference cases to end-users interested in benefiting from our global expertise.
